

Project Idea Description — *Fragments of Hope*

The project is an interactive, animated story comprising **seven scenes** (one cover scene and six main story scenes). The story takes place in a world that has lost all its colors, symbolizing the loss of emotions and hope. Each scene represents a different missing emotion: **identity, courage, clarity, connection, acceptance, and purpose.**

The story follows a single main character who collects **six glowing fragments**, where each fragment restores a specific color to the world and brings back life to it. The visuals begin entirely in grayscale and gradually become more colorful as the character progresses through the scenes, ending with a fully restored and vibrant world.

Each scene features a different environment and atmosphere, such as a forest path, a desert landscape, a beach, an urban cityscape, a library or university space, and a cultivated garden. The project includes animated objects, lighting effects, and interactive controls that let the user navigate the story and trigger visual transformations.

The project includes **one main character** and environmental elements that act as supporting visual components rather than additional characters. The final scene delivers a closing message that losing direction is an inevitable part of life, but growth comes from actively rediscovering who we are and what we truly want. It emphasizes that progress is not driven by temporary motivation, but by discipline and the choices we continue to make even when motivation fades.

Project Work Distribution

This plan assigns one main story scene to each girl, while the **Cover Scene** (Scene 1) is a shared responsibility or handled by the Lead Developer, as it serves as the project's entry point.

<i>Member</i>	<i>Assigned Scene</i>	<i>Environment</i>	<i>Emotion & Color</i>
<i>Member 1</i>	Scene 2	Forest Path	Identity (First Color)
<i>Member 2</i>	Scene 3	Desert Landscape	Courage
<i>Member 3</i>	Scene 4	Beach	Clarity
<i>Member 4</i>	Scene 5	Urban Cityscape	Connection
<i>Member 5</i>	Scene 6	Cultivated Garden	Acceptance
<i>Member 6</i>	Scene 7	Library / University	Purpose (Full Color)

Scene Breakdown & Coding Tasks

Scene 1: The Cover (Simple UI)

This scene is the "Main Menu" and should be kept simple to ensure easy navigation.

- **Visuals:** Grayscale background with the title "Fragments of Hope".
- **Interactive Elements:** Simple buttons for **Start Game**, **Exit**, and perhaps an **About** section.
- **Coding Task:** Implement a basic switch statement or if-else logic to handle button clicks and transition to Scene 2.

Scenes 2–6: The Journey (Grayscale to Color)

Each developer will follow a similar coding structure to maintain consistency:

- **The Environment:** Draw the specific setting (e.g., Forest or Desert) using grayscale shapes or sprites.
- **The Fragment:** Place one "glowing fragment" as an interactive object.
- **The Transformation:** Code a function that, once the character touches the fragment, triggers a color swap—changing the grayscale environment into its assigned color.
- **Character Movement:** Use simple keyboard input (arrows or WASD) to move the main character toward the fragment.

Scene 7: The Finale (The Vibrant World)

The final developer handles the conclusion and the project's core message.

- **Visuals:** Starts with the "Purpose" fragment in a garden and ends with the entire world becoming vibrant and multi-colored.
- **The Closing Message:** Display the text regarding growth, discipline, and making choices even when motivation fades.
- **Coding Task:** Ensure all previous colors are "unlocked" here to show the fully restored world.

Puzzle Distribution & Logic

Member	Scene & Environment	Puzzle Idea (The "Lock")	Coding Logic
Member 1	Scene 2: Forest (Identity)	The forest is full of "fake" grayscale fragments that disappear when touched. Only one specific fragment—the one that matches the character's glowing eyes or emblem—is the real "Identity" fragment.	Logic: If the player hits fake_fragment, delete the object. If the player hits real_fragment, isPuzzleSolved = true.
Member 2	Scene 3: Desert (Courage)	The Wind Resistance: The fragment is behind a sandstorm. The player must hold a specific key to "brave" the wind and move forward.	Input Handling: Apply a constant "negative force" to coordinates unless a specific boolean isBraving is true.
Member 3	Scene 4: Beach (Clarity)	The Puzzle (The Mirror Path): There are three paths marked by simple shells or stones on the sand. Two paths are "false" and teleport the player back to the start of the beach. Only one path is the path of "Clarity."	You only need three invisible "trigger boxes" (rectangles) on the floor. Logic: * If Player hits Box_A or Box_B, ResetPosition(). If Player hits Box_C, the "Clarity" fragment appears, and the scene turns blue/vibrant.
Member 4	Scene 5: City (Connection)	The Bridge Links: Connect broken power lines by interacting with them in the right order to light up the path.	Linked List / Graph: Create nodes that turn "on" only when the previous neighbor is active.
Member 5	Scene 6: Library (Acceptance)	The Sorting Task: Place scattered books back onto shelves.	Sorting Algorithm: Compare the "intensity" value of the object with the shelf's required value.
Member 6	Scene 7: Garden (Purpose)	The Bloom Sequence: Press keys in a rhythmic pattern to make flowers bloom and reveal the final fragment.	Timer/Queue: Store player inputs in a queue and compare them to a "Master Pattern" within a time limit.
